

	Amifi (QFC incorporation in progress, Qatar) Deterministic Intelligence Software Company Investor Interest Flyer – August 2026	Pre-Seed SAFE: \$350K to \$500K
---	---	--

Amifi is a pre-commercial Deterministic Intelligence software company, launching first in Personal Finance and building toward reusable B2B software infrastructure.

Why Amifi?	What are we building?	Why Invest Now?
High-trust AI needs a deterministic layer. Today's AI is powerful but often probabilistic, cloud-dependent and difficult to audit. High-trust use cases require intelligence that is explainable, repeatable and privacy-preserving. Amifi starts with Personal Finance as the proving ground: sensitive data, recurring decisions and fragmented information make it an ideal environment to validate Deterministic Intelligence before extending the architecture into B2B fintech, SME and enterprise software. Software-only model: no custody, brokerage, transaction execution or financial advice. 5-Year Modelled SOM ~1.70M Families	1. Amifi: Money Tracker A privacy-first financial organization app for middle-income and expat families, bringing budgeting, expenses, assets, liabilities, goals and multi-currency finances into one system. 2. Amifi: Partner Tracker B2B partner, referral & attribution infrastructure 3. Deterministic Intelligence SDK/API Reusable financial organization, categorization, budgeting and explainable intelligence capabilities for fintechs and software platforms. 4. Platform Products Deterministic in-app guidance and developer tools for broader B2B applications. 2 Products Near Launch: Money Tracker - B2C Partner Tracker - B2B	1. Product largely built Final Google Play alpha/beta testing. Capital is for launch, not MVP development. 2. QFC pathway progressing Part 1 approved; incorporation completion underway before commercial scale. 3. Capital-efficient execution Founder-funded and lean to date. Pre-seed capital accelerates launch, validation and distribution. 4. Platform optionality Personal Finance is the first proving ground for Deterministic Intelligence, with future fintech, SME and enterprise applications. Use Of Funds: Launch • Validation • Distribution
Current entry point: pre-launch, ahead of initial commercial validation.		

Pre-Launch Model

~2,000	~97-98%	~\$4.56	~39x
Paid users to break-even (~0.12% of 5-year SOM)	Gross Margin	Blended Monthly ARPU	Modelled LTV/CAC

** Illustrative pre-launch model assumptions; not historical performance. To be validated post-launch.*
