CalmSync: Neuro-Adaptive Wellness Technology,
Powered by the \$CSY Token Economy

*A live neurotech product with defense-grade validation, built on a token engineered for real usage and long-term alignment
— not short-term speculation.*

Status

Live Product • Scaling

Instrument

\$CSY — Utility & Governance Token

This Round

Seed Round — \$420,000

Wellness spend keeps rising. Outcomes don't.

\$1T/yr

in lost global productivity from
depression and anxiety (WHO)

83%

of employees still report burnout
despite existing wellness budgets

\$0

of that spend is tied to a measurable,
rewarded outcome — until now

The gap isn't awareness — it's instrumentation. Apps and wearables observe stress after the fact. Nobody has turned real-time nervous-system regulation into both a product enterprises renew and a token economy users actually use.

THE SOLUTION

CalmSync closes the loop between detection and intervention.

A wearable neurotech platform that reads nervous-system state and responds in seconds — not a dashboard that reports it a day later.

1

Multi-Sensor Fusion

EEG, PPG, and skin-temperature sensing catch neurological stress shifts as they begin, not after they've already cost a workday.

2

Neuro-Adaptive AI

A personalized baseline model, validated at 99.7% stress-state accuracy across independent research partners, tells signal from noise.

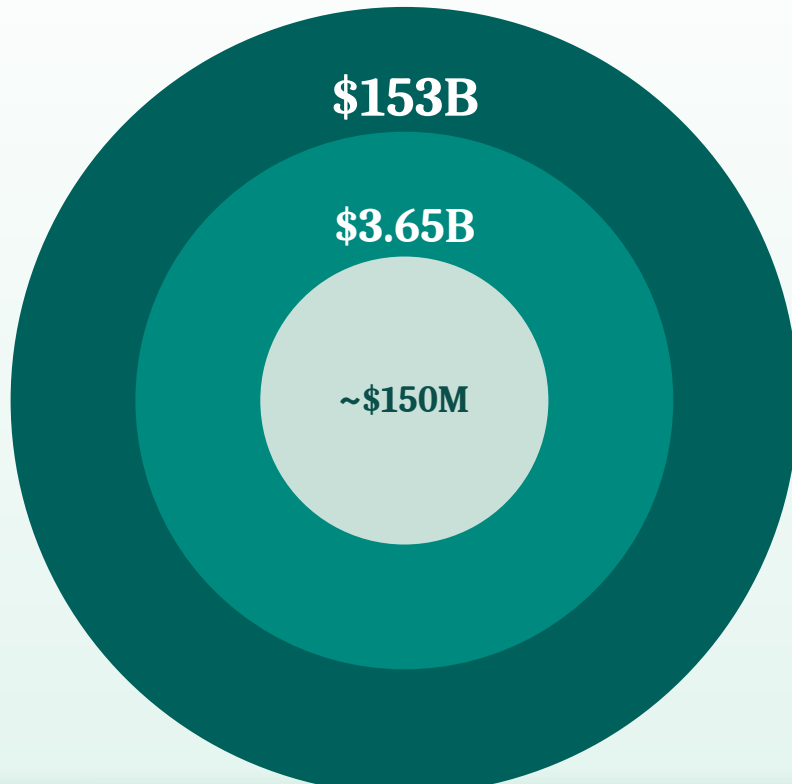

3

Bio-Responsive Intervention

Cognitive and physiological guidance is delivered in the moment, restoring nervous-system balance before burnout compounds.

A Large Market, Entered the Efficient Way

TAM — Digital mental health, by 2034

\$33.0B (2025) growing to \$153.0B at an 18.6% CAGR (Towards Healthcare).

SAM — EEG-enabled devices, by 2034

\$1.52B (2025) growing to \$3.65B at a 10.2% CAGR (Precedence Research).

SOM — 3-year target

~\$150M: hardware + subscription revenue from the 1,000+ wellness centers and enterprise/defense pipeline already engaged.

Go-to-Market: a flywheel, not a paid-acquisition budget

Wellness centers (near-zero CAC showrooms) → Corporate & defense mandates (institutional authority) → B2C conversion, as each enterprise user becomes an organic ambassador for the mass-market rollout.

WHY WE'RE TALKING TO A WEB3 FUND

A live product backing the token, not a whitepaper backing a hope.

Usage precedes speculation

CalmSync already has paying enterprise, defense, and wellness-center customers today. \$CSY demand starts from real product usage, not a roadmap promise.

Vesting built for believers, not flippers

Every tranche — investor and insider alike — carries a real cliff and a multi-year linear vest. The structure rewards holders underwriting the network, not the TGE.

Compliance-first, from the first token sold

KYC/AML on every priced tranche, transparent on-chain allocation, and a dedicated Compliance & Legal reserve funded from day one.

One Token. Four Jobs.

\$CSY is CalmSync's native token — the same token users earn by improving their nervous-system health is the token this round is denominated in.

Earn

Users earn \$CSY for completed sessions, verified biometric improvement, and referrals — the same reward loop that drives daily engagement.

Spend

Redeemable for premium AI coaching, device upgrades, wellness-center credits, and the partner marketplace.

Govern

As governance rolls out, holders help direct a share of the Research and Ecosystem reserves toward clinical studies and integration priorities.

Hold

A fixed 1,000,000,000 supply, with 71% allocated to users, ecosystem, liquidity, treasury, research, marketing, and compliance — not any single insider group.

Every Headset Purchase Fuels Real \$CSY Demand

A fixed percentage of every headset's sale price is used to buy \$CSY on the open market and credit it directly to the buyer's wallet — turning first-time web3 users (an estimated 90% of our base) into token holders without them ever having to buy crypto themselves. Hardware sales become a structural, recurring source of retail buy-side demand.

Validated Before the Raise, Not After

Coal India Pilot

Deployed cognitive-wellness monitoring in a live public-sector operational setting.

Indian Army Pilot

Field-tested with a defense-sector user base under real operational stress conditions.

Independent Research Validation

99.7% stress-state detection accuracy confirmed by outside research partners, not internal benchmarks.

1,000+ Wellness Center Pipeline

Signed and in-diligence distribution agreements across the wellness-center channel.

85% Launch-Ready

Core hardware, firmware, and AI stack substantially complete — this raise funds manufacturing scale, not R&D risk.

Real-world deployments in defense and public-sector settings are the diligence a web3 allocator can't get from a whitepaper — they're evidence the product survives outside a demo.

Where \$CSY's Utility Expands From Here

EEG Data Tokenization & Licensing

Anonymized, consented EEG and biometric datasets licensed to pharmaceutical and academic research partners as objective biomarker data for clinical trials — a new revenue line, not a new token.

Verified Wellness Digital Identity

Portable, privacy-preserving proof of cognitive baseline that travels with the user across employers and providers.

Provider & Clinician Marketplace

Vetted therapists and coaches transact through the platform; CalmSync takes a marketplace fee, settled in \$CSY or fiat.

Insurance & Actuarial Partnerships

Aggregate outcome data supports risk-adjusted premiums for partner insurers — a licensing relationship, not a data sale.

DAO-Governed Research Grants

As governance rolls out, \$CSY holders direct a portion of the Research reserve toward clinical studies and priorities.

White-Label & Enterprise Licensing

CalmSync's detection engine licensed to third-party wellness and health platforms, extending \$CSY's utility beyond the core product.

\$CSY Full Allocation & Vesting Schedule

Total supply: 1,000,000,000 \$CSY · Total raised (Seed + Private + Strategic): \$3,120,000 + Public Sale TBD

Category	Alloc %	Tokens	Price	Raise	Cliff	Linear Vest	Total Lockup

Total	100%	1,000,000,000		\$3,120,000 + TBD			

TOKEN SALE STRUCTURE

Four Tranches, Priced for Conviction

THIS ROUND

Seed

\$0.0140

Raise: \$420,000

12mo cliff • 30mo linear

Private

\$0.0300

Raise: \$1,200,000

9mo cliff • 27mo linear

Strategic

\$0.0500

Raise: \$1,500,000

6mo cliff • 24mo linear

Public

TBD

Raise: TBD

3mo cliff • 9mo linear

Seed carries the best entry price in the round structure — that ground-floor price is paired with the longest lockup discipline of any tranche (12-month cliff, 30-month linear, 42 months total), so early conviction is rewarded with price, not with faster liquidity.

Capital Reserved to Outlast Any Single Round

71% of \$CSY supply funds users, ecosystem, liquidity, treasury, research, marketing, and compliance — combined team, advisory, and investor tranches sit under 30%.

Treasury — 14%

140,000,000 \$CSY (12-mo cliff, 36-mo linear, 48-mo total) funds multi-year ecosystem development, independent of any single raise.

Compliance & Legal — 4%

40,000,000 \$CSY (36-mo linear) is a standing reserve for regulatory work as CalmSync scales across jurisdictions.

Research — 3%

30,000,000 \$CSY (48-mo linear) funds clinical validation studies independent of product revenue.

Liquidity — 8%

80,000,000 \$CSY (LP-locked 12 months) seeds and protects on-exchange liquidity depth at launch.

Roadmap-Gated Monetization

None of this is baked into the raise — it's flagged as optionality, not something we're asking you to underwrite today.

Now - Q4 2026

Round Close & Manufacturing Scale

- Core \$CSY earn/spend utility goes live
- Hardware-linked \$CSY buyback launches with the manufacturing ramp
- Provider & clinician marketplace opens

Q4 2026 - Q1 2027

Public Sale & Initial DEX Listing

- Public \$CSY sale opens to retail, beyond the priced private rounds
- Initial DEX listing establishes on-chain price discovery and liquidity
- Same cliff/vest discipline as Seed, Private & Strategic — no unlocked-at-listing supply

Q1 - Q2 2027

Enterprise & Defense Scale

- Enterprise workforce analytics-as-a-service
- Insurance & actuarial data partnerships
- Practitioner certification program

Q4 2027

Data Licensing, Identity & Governance

- Consented EEG dataset licensed to pharma/academic partners as clinical-trial biomarker data — the biggest optionality piece
- Verified wellness digital identity
- API licensing to third-party wearable makers
- Proof-of-Mindset ESG/CSR credits
- \$CSY holder governance

Backed by clinical and defense-sector validation partners across neuroscience, AI, and applied robotics research.

Seed Round — \$420,000

30,000,000 \$CSY at \$0.0140/token — 3% of total supply — 12-month cliff, 30-month linear vest, 42 months total lockup.

Roadmap

**A Product You Can Wear.
A Token Economy You Can Trust.**
