SUMMARY

Software Developer with 2+ years building scalable, API-driven web applications on PHP and serverless architectures (Supabase, Firebase) focused on performance, reliability, and AI-assisted delivery. Strong in OOP, MVC, REST/GraphQL API design, relational database optimization (MySQL/PostgreSQL), and Agile delivery.

EXPERIENCE

Software Developer — OpenMalo Technology, Rajkot

Oct 2025 – Apr 2026

- Migrated the backend to Supabase Postgres, Auth, and Row-Level Security for merchant data, removing manual server provisioning and reducing access-control risk across the production deployment.
- Engineered a real-time notification system, as evaluated by improved responsiveness to critical merchant events, by integrating Firebase Cloud Messaging into the CodeIgniter 4 backend.
- Delivered an inventory management module with report export and merchant approval flows, reducing manual stock reconciliation by 60% and supporting 15 merchants.
- Directed the technical translation of design specs into production UI, as assessed by pixel-accurate parity with shipped product, by implementing responsive HTML5/CSS3/JavaScript components.
- Accelerated debugging and implementation cycles, as measured by improved overall development efficiency, by leveraging AI-assisted development workflows.

Junior Software Developer — Cybercom Creation, Ahmedabad

Jan 2024 – Sep 2025

- Rebuilt the checkout data layer on GraphQL with selective field resolution, cutting API payload size and improving page-load time on the checkout flow by 40%.
- Re-architected catalog and order-management modules, as analyzed by improved response times on high-traffic endpoints, by implementing Redis caching across Magento 1.9 product and session data paths.
- Built a bulk catalog-update tool that cut merchant manual editing time by enabling batch product-detail updates through a custom Magento module.
- Resolved Magento EAV performance bottlenecks by profiling slow SQL queries and re-indexing attribute lookups, reducing query time on core storefront paths from 100 ms to 70 ms.
- Coordinated cross-functional delivery with Vue.js frontend engineers and QA, as quantified by on-time sprint delivery across concurrent release cycles, by running Agile/Scrum ceremonies and maintaining shared API contracts.

PROJECTS

URL Shortener — Go, React, PostgreSQL, Redis, Docker, JWT | [Github](#)

- Architected a multi-tenant URL shortening platform, as measured by isolated per-user link ownership, by designing a Postgres schema with foreign-key-scoped queries and JWT-based auth.
- Engineered a cache-aside caching layer in Go, as evaluated by serving repeat redirects from cache with automatic fallback, by implementing Redis-first reads with Postgres backfill.
- Built Redis-backed rate limiting on auth endpoints, as measured by mitigating brute-force and spam-registration risk, via sliding-window throttling with atomic INCR/EXPIRE.

OrderStatus Bot — Amazon Lex, AWS Lambda, DynamoDB, API Gateway | [Github](#)

- Deployed a dual-channel fulfillment layer, as evaluated by successful request handling from both conversational and programmatic clients, by building a single Lambda that branches on event shape for both Lex and REST.
- Configured Lex slot-based entity extraction for order-ID capture and integrated DynamoDB (AWS SDK v3) for real-time order-status lookups, debugging IAM/event-schema issues via CloudWatch.

LinkLine — React.js, Node.js, MongoDB, WebSocket | [Github](#)

- Built a real-time chat app with Socket.IO and MongoDB, supporting one-on-one and group messaging with normalized data modeling and JWT-protected routes.
- Engineered a Socket.IO room strategy, as measured by messages reaching only intended recipients without echo-back, by using personal user rooms with JWT-authenticated, protected-route middleware.
- Implemented secure JWT authentication with bcrypt password hashing, guarding all chat/message APIs and admin-gated group management mutations.

TECHNICAL SKILLS

PHP, JavaScript/TypeScript, Java, Kotlin, Python, C++, Dart, Go, CodeIgniter 4, Magento 1.9, Laravel 12, Node.js, Express.js, React.js, Gin, MySQL, PostgreSQL, MongoDB, SQLite, Redis, AWS (Lambda, API Gateway, DynamoDB, IAM), Firebase, Supabase, Docker, Git, N8N, Claude/Claude Code, Cursor, ChatGPT

EDUCATION

Bachelor of Technology, Information & Communication Technology — Marwadi University, Rajkot (CGPA 8.25) 2021 – 2024
